ABSTRACT

ABSTRACT

❖ E-commerce websites are an increasingly popular way for businesses to reach consumers in the digital age. They provide customers with the convenience of shopping online, often offering a wider selection of products and services than a traditional brick-and-mortar store.

❖ E-commerce websites also allow for more personalized and targeted marketing strategies, creating a more efficient customer experience.

❖ At the core of any e-commerce website is a content management system (CMS), which is responsible for managing the site's content, including product descriptions, images, and reviews.

❖ E-commerce websites also require payment processing systems, such as PayPal, and advanced security protocols to ensure customer data is kept safe. Additionally, the website should have a search engine optimization (SEO) strategy in place to ensure it ranks highly in search results.

❖ To ensure a successful e-commerce website, businesses should focus on having an attractive design and easy-to-navigate user interface. This should include a clear and concise product catalog, as well as an intuitive checkout process.

❖ Additionally, businesses should consider incorporating features such as product recommendations, customer reviews, and wishlists. Finally, businesses should focus on providing exceptional customer service. This should include offering assistance with product selection, providing fast and reliable.

INTRODUCTION

CHAPTER 1

INTRODUCTION

- ❖ Welcome to our online shopping website! We offer a wide variety of products at the best prices. Our website is designed to make shopping easy and enjoyable. We have a vast selection of smartphones. Our user-friendly website allows you to browse our products quickly and easily, with filters to help you narrow down the selection based on your budget and preferences.

- ❖ We stock hundreds of brands and products, including the limited and special edition smartphones and hard-to-find items. We also have regular sales and discounts to ensure that you get the best deal possible. We are committed to providing excellent customer service and strive to ensure that our customers are happy with every purchase.

- ❖ We use secure payment methods and a reliable delivery service to ensure that your orders arrive safely and on time. We also offer a no-questions-asked returns policy to ensure that you are completely satisfied with your purchase. We want you to be confident in your shopping experience and guarantee that you will be satisfied with our products and services.

- ❖ So don't think start visiting our online shopping website. We hope you find what you are looking for and enjoy a pleasant shopping experience.

1.1 PROBLEM STATEMENT

1. Competition: With the rise of eCommerce, many businesses are investing in online stores, creating stiff competition and making it difficult for businesses to stand out.

2. Security Concerns: Due to the sensitive nature of online shopping and the risk of fraud and identity theft, customers are often worried about the security of their information when shopping online.

3. Shipping Costs: Shipping costs can be a major barrier to online shopping, especially for heavier products.

4. Returns and Refunds: It can be difficult for customers to return products they don't like or that don't fit, and they may not be sure how the return process works.

5. Lack of Engagement: It can be difficult for shoppers to get the same level of engagement as they would in a physical store.

6. User Experience: Poor user experience can be a major barrier to online shopping, as customers may be unable to find what they're looking for or may be confused by the checkout process.

1.2 OBJECTIVE

To create an easy-to-use, reliable, and secure online shopping experience that provides customers with a wide variety of smartphone products at competitive prices. And lifetime Customer support.

1.3 OVERVIEW

❖ A shopping website is an online platform that allows users to browse and purchase products or services. It is the digital equivalent of a physical store, allowing customers to view and select items to purchase.

❖ The shopping website typically contains product information, photos, reviews, and other details to help customers make informed decisions.

❖ Most shopping websites also provide a secure checkout process, allowing customers to pay for their purchases quickly and securely.

❖ Shopping websites may also offer subscription services, loyalty programs, and other features to create a more personalized shopping experience.

SYSTEM SPECIFICATION

CHAPTER 2

SYSTEM SPECIFICATION

2.1 VS-code (Visual Studio code):

VS code is one of the powerful editors with which we can create our HTML page with ease. This editor is published by Microsoft and it is most famous with the web developers. This editor is the best alternative for the built-in windows notepad.

2.2 HTML (Hyper Text Markup Language):

HTML is basically used to design the basic framework of the website. The entire main content of the website is created with the help of HTML. It is like the human skeleton which produces rigidity and shape.

2.3 CSS (Cascading Style Sheets):

CSS is used along with HTML in order to style the webpage. There are three types of CSS-editing:

- Inline CSS – Styles the HTML page in the element itself.

- Internal CSS – Styles the HTML page within the *<head></head>* tag.

- External CSS – Uses an external CSS file to style the html page. Among

these three types, the internal and external CSS are preferred most.

2.4 JS(JavaScript):

In order to make a html page responsive, JavaScript is used. JavaScript has the ability to manipulate the inner HTML elements. Similar to CSS there are three types ofJS.

- Inline JS-Using JS within the HTML tags

- Internal JS-Using JS in the *<script></script>*tag in the head or body of HTML

- External JS-Using a separate JS file.

PROPOSED SYSTEM

CHAPTER 3

PROPOSED SYSTEM

This chapter gives a small description about the proposed idea behind the development of my website.

3.1 PROPOSED SYSTEM

A proposed system of a shopping website included the following components:

1. User Registration: The website should have a user registration feature where customers can create an account with their personal data, such as name, address, contact number, email address, etc.

2. Payment Gateway: The website should have a secure payment gateway for customers to make payments.

3. Product Categories: The website should have product categories to make it easier for customers to find the products they are looking for.

4. Product Reviews: The website should have a product review feature, where customers can leave reviews and ratings on products.

7. Customer Support: The website should have a customer support team to help customers with any queries they may have.

8. Security: The website should have secure protocols in place to ensure the safety of customers' data.

Overall, a proposed system for a shopping website would be designed to provide a comprehensive and user-friendly platform for customers to view their product.

3.2 ADVANTAGES

The advantages of a shopping website include increased visibility and exposure, convenient and accessible information, the customer feedback and reviews, increased brand awareness, and data-driven decision making.

1. Convenience: Shopping online is extremely convenient for customers as they can shop anytime and from anywhere.

2. Variety: Online stores often have a wider variety of products than brick and mortar stores.

3. Price: Online stores can offer lower prices due to lower overhead costs.

4. Speed: Online shopping is much faster than traditional shopping.

5. Comparisons: Shopping online makes it easier to compare prices and features of different products.

6. Reviews: Customers can read reviews from other customers before making a purchase decision.

7. Discounts: Online stores often offer discounts or special deals that are not available in physical stores.

8. Easy Returns: Online stores often offer easy return policies that allow customers to return items with ease.

METHODOLOGIES

```
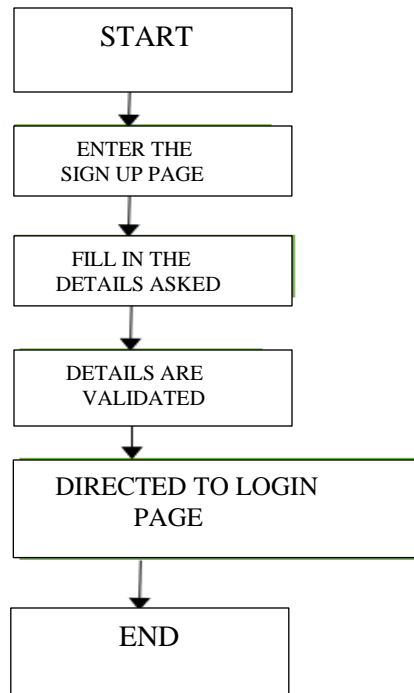

Fig 4.3 SIGNUP PAGE FLOWCHART

This page asks users about the basic details of the user to create an account. This page asks for details like username, password, email id, phone number. After the user enters the details, these details are then validated by our code . If all details are correct, then the user is then directed to the login page.

4.4. EXPLORE PAGE

If you have forgotten your password, you can reset through this page. It directs to login page.

4.5. PRODUCT PAGE

A product page on a shopping website is a page dedicated to a specific product that contains all the information a customer needs to make a purchase decision. This page typically features product images, pricing information, product descriptions, customer reviews, and product specifications.

4.6. PAYMENT PAGE

The payment page of a shopping website is the page where customers enter their payment information to complete the purchase. This page includes the payment form, payment methods, payment gateway, and the payment confirmation page. It is important for the payment page of a shopping website to be secure and user-friendly.

4.7. PAYMENT SUCCESSFUL PAGE

In payment successful page, the website shows the user that they have been successfully placed the order in the e-commerce website.

4.7. CONTACT PAGE

In contact page, if you have any questions, comments or concerns about the website, products or services. You can contact them by filling out the form in the page, or by emailing them.

4.8. ABOUT PAGE

In the about page, the developer of the website or founder of the company tells about their page and their company.

IMPLEMENTATION AND RESULT

CHAPTER 5

IMPLEMENTATION AND RESULT

This chapter gives a description about the output that we produced by developing the website of our idea.

5.1 HOME

A home page is the primary web page that a visitor will view when they navigate to a website via a search engine, and it may also function as a landing page to attract visitors.
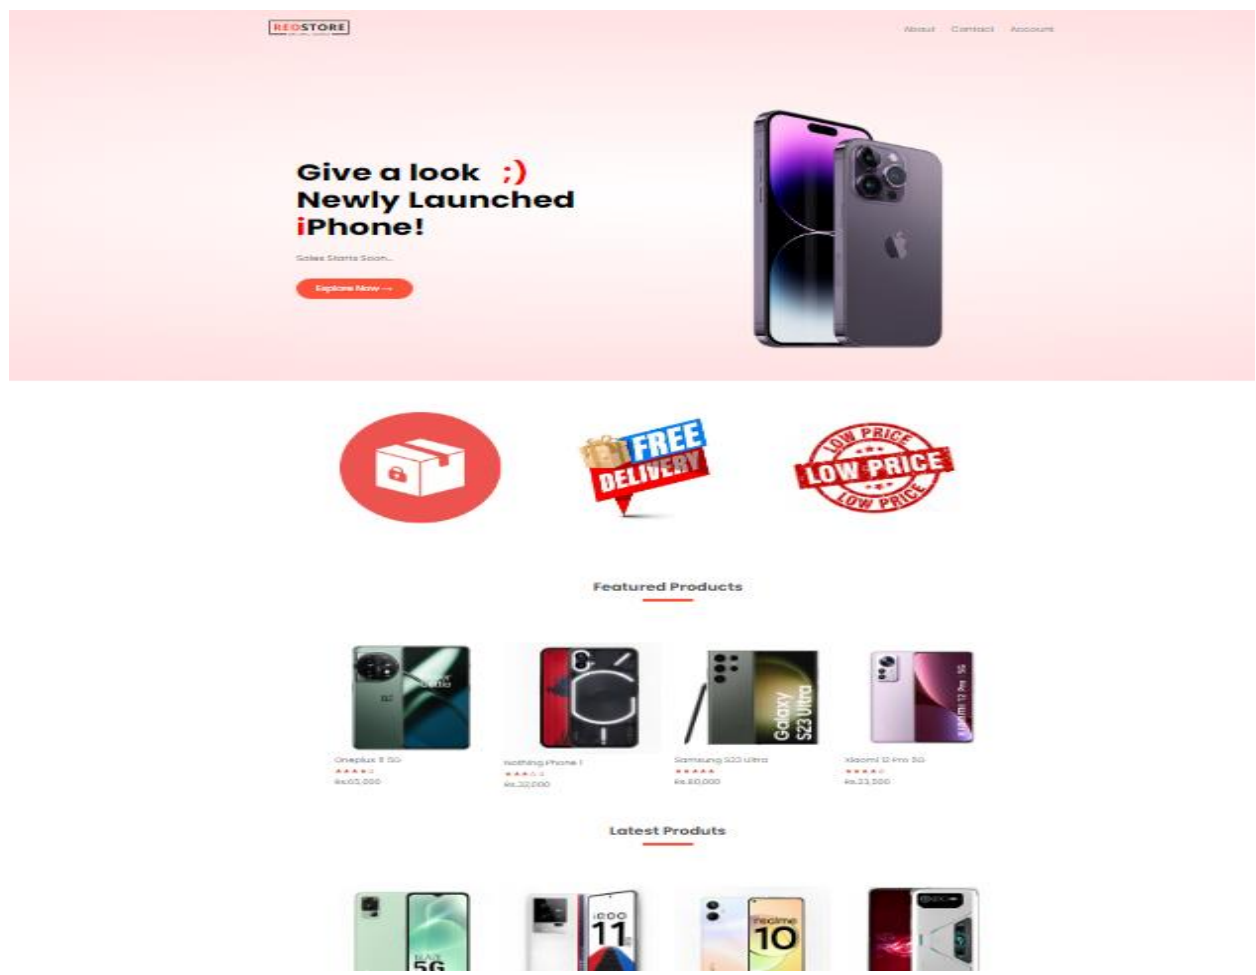

Fig 5.1 HOME PAGE

5.2LOGIN

When User enters my website, you will be asked about your login details like email idand password. The login details will be verified with the details given while the user creates an account.
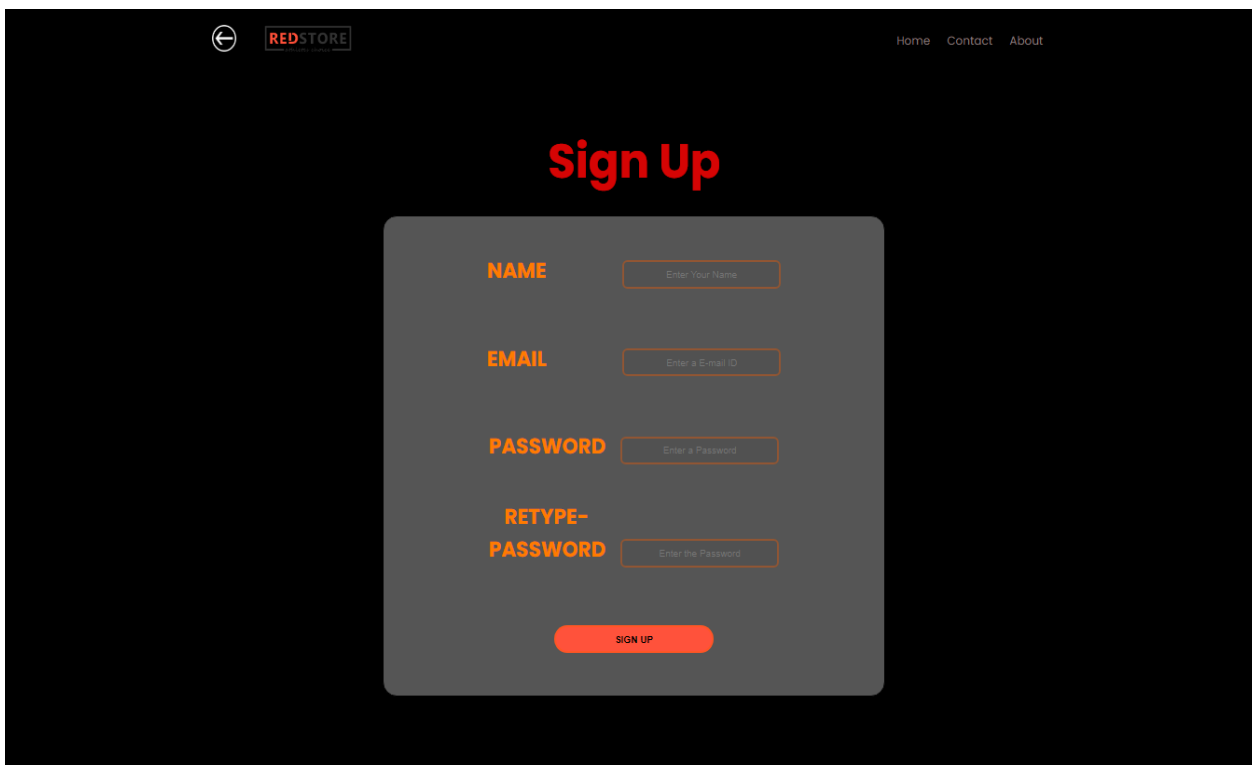

Fig 5.2 LOGIN PAGE

5.3SIGN UP

If a user doesn't have an account on the website, User can use a component named create new account available in the login page. When the user clicks on that he will be redirected to the signup page. In sign up he should fill up his email id, password and phone number. These inputs will be validated.

                <p>&#10023; Online shopping is a great way to shop for products and services from the comfort of your own
home. With the convenience of the internet, customers can browse a wide selection of items, compare prices, and make
purchases quickly and securely. Online shopping has become increasingly popular over the years because of its
convenience and affordability. Shopping online allows customers to access a larger selection of products than is
available in stores and often at discounted prices. Additionally, customers can often find better deals and discounts
online than they would in a physical store. With the increased selection, convenience and affordability, online shopping
is an excellent way to purchase the items you need and want.</p>

CONCLUSION

CHAPTER 6

CONCLUSION

This chapter talks about the conclusion that anyone can drive from the project and the learning we learnt by taking over this project.

6.1 CONCLUSION

The completion of the "**SHOPPING**" website project is an important milestone for me. I have worked hard to build a website that is easy to use, secure, and fulfills the needs of my customers. I have provided my customers with a fast, reliable,and secured delivery. I am proud of the website I have created. I have been able to make the website user-friendly. Overall, I am proud of the work I have done on the "**SHOPPING**" website project.

6.2 FUTURE SCOPE

With digitation, the customer behavior is modified from trusting their local bakery shops to the mouth-watering, beautiful flavors available and every day created by the professional chefs. Consumers have learned to extravagant their taste buds and 'sweet' is no longer just sweet and 'bakery' is no longer just loaves of bread anymore! Bakery products are food products that involve several ingredients, but more importantly, the food products involve baking in the oven.

Invest in your own bakery shop: Entrepreneur opportunities is one of the best career prospects for a bakery professional and investing in a bakery benefit a community and can prove to be a boon for your pockets.
